Source: Joe Maring / Android Central have brilliant decision to switch from iPhone to Android. Congratulations and welcome! Now you just need to get all your contacts from your iPhone and your new Android phone and your Apple ties will be severed and you will be reborn (or something). Here's how to do it. How to export contacts using iCloud you want to first make sure your iPhone is supported on iCloud. Once done, you're ready to make the move. You will begin by exporting the VCard. Note: Many new Android phones will have your own data transfer apps (Samsung Smart Switch, LG Bridge, etc.), which simplifies data transfer. Depending on your phone, you can also be able to use a lightning-to-USB-C cable (or micro-USB if necessary) to move to this way. Follow the instructions on the screen if requested to do so. Start your web browser on your computer. This process does not work with Chrome. Use Firefox or Safari. Navigate on icloud.com. Log in using your Apple ID and password. Click Contacts. Click All contacts in the upper left corner of the screen. Source: Android Central Press the Command key and the key A button on the keyboard simultaneously if you have a Mac. Press the CTRL key and a key on the keyboard simultaneously if you have a PC. Click the Settings button in the lower left corner of the screen. It looks like a gear. Click Export VCard. Your contacts will all be saved as .vcf file in downloads. If a new window opens, you will simply need to select all your contacts again, right-click and exhibit again. Source: Android Central How to import contacts using Google Contacts ahead, importing the VCard using Google. If you don't have a Google account, sign up now, since you need a Google account for your Android phone. If you have already set up your Android phone, you are likely that you have created a Google account in the process. Start your web browser on your computer. Any web browser will work. Log in to your Google account. Go to contact.google.com. Click Import. Click Select File. Click on the VCard and open it from your downloads or wherever you saved, Click Import. All your contacts should appear after a few seconds. Source: Android Central How to synchronize your Google account with your Android phone You can synchronize your phone with your Google account, which can be done by any Android phone. If you haven't transformed your Android phone yet, you're lucky; You will be wondered if you want to synchronize an account during configuration. Just use the account you have your contacts and follow the prompts on the screen. If you have activated your Android phone and you have crossed the configuration, here's how to synchronize your Google account to get your contacts on your phone. Start the settings app from the home screen, notification toning or app drawer. Touch Account. Touch your Google account. Source: Synchronization of the Central Tap Android account. Touch the three points in the upper right corner. Touch Sync now. Source: Android Central How to add your iPhone Contacts to your phone Android You will just send yourself your VCard if you don't have a Google account to synchronize with your Android phone. If you have a Google account, your phone will inevitably sync and then you will probably have duplicate contacts and will only be a mess. Start your e-mail app from your home screen or your Android phone's tray. Open the e-mail containing your VCard file. Touch the Download button next to the VCard file to download it. Scroll down from the top of the screen to reveal the notification tone. The download notification completed to open the VCard file. Source: Android Central Depending on the phone you have, you will be able to save your contacts on your device or on the Google Contacts app. If everything else fails, try to visit Android.com/switch, which takes you through the use of Google Drive to transfer everything from your iPhone to the new Android phone. You will have to use safaris to do Some accessories to start here are some accessories to help you start with your new Android phone! Whether you want to buy apps, games, movies or audiobooks, you can buy Digital Google Play gift cards from \$ 25 and go up to \$ 100 to build your digital library. Having a reserve charger is always a good idea, and this from AuKey supports quick charge 3.0 and has two USB ports in a natural size for greater comfort. We could earn a commission for purchases using our links. Find out more. Like most of us, your phone is probably your main camera and thanks to the ease of use, you probably capture at least some photos a day. Those add over time, and sucked to lose them all just because you're passing from iPhone for Android. Thanks to Google's photos, you don't have to! How to transfer iPhone photos to Android using Google Photos Download Google Photos from the App Store. Start Google Photos from your home screen. Touch Start. Touch OK when asked to allow Google photos to access your photos. Touch the switch next to using the cellular data to back up if you want to back up photos on mobile. If you don't want to accumulate a grave data bill, leave it off. Tocca continues. Touch the circle next to high quality or original. Touching high quality compresses your photo on 16 megapixels reduces file size, but get "unlimited storage" (2pb). The original will keep the size of the original file and with your Google Drive storage (15 GB). Tocca continues. Touch Receive a notification if you want notifications when someone shares photos with you. Otherwise it does not touch thanks. Tap Leave to leave notifications if you selected No thanks. This is everything! Google Photos automatically synchronizes your photo library and you will be able to access you on your Android phone or practically any device with an internet connection. Don't expect to see your photos on a different device right away. Synchronization may take a lot, especially if you have many photos. Requests? Questions about photo transfer with Google Photos? Let us know in the comments below! We could earn a commission for purchases using our links. Find out more. Getting a new phone is rough. Essentially you lose everything you had on the old phone, which can be a bit a little a shock for the first few days. While some things "like images, for example, are automatically with you through your Google account, other creatures comforts, such as your text messages, not synchronized automatically. But you don't need to be so. If you can't Support the view of an empty SMS box, you can easily move all your current messages into a new phone in a few steps with an application called SMS Backup & Restore. The first thing you need to do is installed said app on both phones, And make sure each of them is on the same Wi-Fi network. He didn't work on a cellular network! Open the app on both phones. On the main screen, tap the "Transfer" button. A new box will open with the details of how the transfer works - in a nutshell, send information to Wi-Fi. Select the appropriate option on each phone: "by this phone ..." on the old phone, "Receive on this phone" on the new one. Á phones will immediately start looking for them on the network. Once the sending phone sees the receiving phone, touch it in the list. This will leave the transfer. The sending phone will push a "Invite" to the receiving phone. You should obviously accept this invitation before anything happens. Á, one That phones have made a connection, the sending phone will give you some options: "Transfer Texts and call logs from the current state" or "Use the latest backup". If you have never used the backup And the SMS restore before, then you shouldn't have a backup available and want to use the first option. Anyway, honestly, I was simply going and choose the first one. It's the most up-to-date. Á, the sending phone will do it will do it. Make a backup and push it to the receiving phone. At this point, just go out for a second. It will not take long. Once finished, you will receive a notification on the receiving phone that requires if you want to accept and restore. You do. It once chosen to do so, the transfer will begin. When it's over, it was essentially done with the sending phone - from here out, everything else is managed on the receiving phone. After the file terminates the transfer, you will receive a notification on a limitation in Android starting from Kitkat that allows only the default SMS app to restore messages. Ergo, you will need to set SMS Backup & Restore as default, at least until the transfer is complete. Tap "Transfer" "Yeses" to backup SMS and restore the default SMS app. Once again, you can change it to your favorite text app once you return restore. And now, the process starts. Kick back, take a coffee. Read a book. Watching TV. Do something that does not include the casino with your phone - this will take some time "(depending on how many information you have to transfer), then let your thing do it. Once finished, you will receive a notification by stating that, together with All the details of the transfer. See all those messages! You can tap the notification if you want, but it simply starts the SMS backup & restore app with the same information, so you could simply fire it. Go ahead and jump in your favorite SMS app - all Your existing texts should now show up in the new phone. The call log should also be populated with information from your other phone. If you have to back up SMS and restore the default app in the steps above, go ahead and jump in the menu of the predefined Android apps and change it into your normal messaging app. You did! Android offers you some options for transferring your contacts to a n Device egg. By default, everything should be synchronized when setting a new device, but even if the synchronization is disabled, it is easy to move your contacts. The simple way: Synchronizes with your Google account Almost all Android devices sold outside China are provided with Google Services, including the possibility of synchronizing your contacts between devices. This should be enabled by default when you log in with your Google account, but Á "e s how to make sure. You are writing this guide using a 2 XL pixel running Android 9.0, but it should be similar to other Android devices. You are also using Google Contacts apps, which you can download from the playback store. These steps may not be the same on other contact apps, so if you have problems, we recommend using Google Contacts. Start by opening the App settings and touching "Account" Touch your Google account. Touch "Sync" Make sure "Contacts" to deactivate is enabled. It must be turned on for your contacts to synchronize. This to! Your existing contacts will synchronize with your Google account, and will be there on any new Android phone. Log in. Manual mode: Backup and restore the contact file If your phone does not offer Google services ... or if you just want to copy things to yourself ... you can back up a .vcf file that has all yours Contacts inside. Start by opening the contact app, then select the menu icon at the top left. Once again, we are using the Google Contacts app here. Tap "Settings" in the menu. Tap the option "Export" on the settings screen. Tap "Allow" on the authorization prompt. This will provide access to the contacts to the photos, to the media and to On your Android device. Tap the button "Save" at the bottom right. You can move the .vcf file to the new phone by copying it to a USB unit, transferring it to a PC or your favorite cloud service. When you get the file moved to the new phone, open the contact app again. Touch the menu icon at the top left. Tap "Settings" in the menu. Tap "Import" on the Settings screen. Select ".vcf file" in the which opens. Browse the .vcf file from your previous phone and open it. Your contacts import to your new phone and you can start calling and messages to your favorite people, people.
