# How to remove bloatware from firestick

How to remove preinstalled apps from firestick. How do i remove bloatware from my amazon fire. How to delete preinstalled apps from firestick.

Please note that this method will work with the 5.2.6.0 and lower firmware version. This will not work on the 5.2.6.1 or higher firmware. First of all, thanks to @Bibhalka for its thread on disabling updates OTA on Amazon Fire TV Stick 2nd Gen. As well as @ Patriot1889 for creating an app confnitrator that allows users to be able to still be able to access At the factory recovery option, wifi settings, Bluetooth settings and application settings in a simple user interface. Finally, thanks to @ ESCORT3W script to remove Bloat on the first Gen Amazon Fire TV Stick which is what I used as a base for what I removed: Loader / Blob / Master / scripts /debloat/bloat-disable.sh Run these commands from your ADB using "ADB Uninstall -K -User 0" below are all the APKs I disabled. This remove all the functions of Amazon, including the launcher, appstore, video, etc. Make sure you have a different and confnitr launcher so you can still access the factory reset option, wifi settings, Bluetooth settings and application settings. I also suggest using the Hyjack lance so that the Home button recognition jobs. Proceed only if you use your V2 fire for non-Amazon Activity and want to push performance for your device. You have been warned. Here is a list of everything I disabled: ADB Uninstall -K -User 0 com.Amazon.device.Software.Ta ADB Uninstall -K -User 0 com.mazon.device.OTA.override ADB Uninstall -K -User 0 com.Amazon.Perm ADB Uninstall -K -User 0 com.Amazon.Aps.App ADB Uninstall -K -User 0 com.Amazon.marketplace ADB Uninstall -K -User 0 com.Mazon .Bueller.Music Adb Uninstall -K -User 0 com.Amazon.bueller.Notification ADB Uninstall -K -User 0 com.Amazon.Client.metrics Adb disorder -K -User 0 com. amazon.client.metrics. Ultima modifica: 6 agosto 2018 Reazioni: Suhridkhan, Striers, KozmoZ4 e 13 Altri sono questa lista utilizzabile per (rooted) Stick Stick 1 (so che posso usare PM Disabilita comando vorrei solo sapere se posso applicare Allo stesso modo. Ho anche dato un'occhiata al filo specifico Debloat per FTV Stick 1, ma i pacchetti sembrano diversi e non hanno mai capito quale dei pacchetti elencati in Debloat.sh script sono sicuri da usare). Grazie. Evviva per questo, prima di provare questo, tuttavia, quanta ram / memoria fa salvare? Quanto ti ha salvato per te? Saluti applausi per questo, prima di provare questo, tuttavia, quanta ram / memoria fa salvare? Quanto ti ha salvato per te? Evitazioni Sfortunatamente, non ho guardato il mio utilizzo della RAM prima e dopo come non ho installato Apk that gave me that application. However, I use my Amazon V2 flares mainly for Kodi and can say to say There is no more delay or no freezing during menu switching. As for your question about how much disk space you will save you, @ RainmanM74 better summarized on the deactivation of the OTA thread, you can't slapken your stick / box with ESC00RTD3W suggestions without root on current firmware versions, because you won't earn additional space on EMMC with only APK uninstall per user 1. The un-installed APKs remains on EMMC, but in an uninstalled status and then "disabled". I hope this helps! Last modified: 27 September 2017 Reactions: Zyclone This is fantastic. Thank you for this, it works a surprise. I created this small app to allow quick access to the three settings we have yet accessed. I would publish it as a link but I can't, because I am a new user mediafire.com/file/yea8l15x2ce2kib/confireato.apk let me know what you think! Reactions: Colosus, Zyclone and Puppino Thank you for this. Only a FYI in case you uninstall all your pitchers, you can reinstall what you were using (or perhaps any apps that gifts as a starter) via ADB while your startup (ADB installs TVLAUNCHER APK or anything else) because it will remain Locked to loading. Reactions: Rainman74 Because this is my first app for Android and I'm not completely sure what I'm doing, Haha. I am me check how to remove those authorizations, as it doesn't need it at all. I will also add to that other menu option. ----- Post added at 01:32 am ----- Previous Post was at 01:25 am ----- OK. Now it has the application menu and should not ask for the authorizations wow! Great job with the app you created @ patriot1889! I'm going to review my first post and suggest that people use your app instead of friendly launcher, as your app is satisfied specifically at TV Stick fire and offers a user-friendly user experience seamlessly. Thanks for this and well done! : Good: Reactions: Puppino welcome! Glad you like it. Please! Glad you like it. You have any ideas, because I can't start the application menu in your app and via launcher activity works (com.mazon.tv.settings / .tv.applications.ApplicationTivity)? But the other 3 men are working well in your app. Is there a difference between menu 3 and the Applications menu? Hi, I'm new in this stuff. I followed the instructions in the first post with a successful variable degree: C: Programs (x86) minimal adb and fastboot> adb uninstall -k -user 0 com.amazon.device.software.ta the -k option uninstall 1 Application maintaining the number of data / cache. At the moment, there is no way to remove the remaining data. You will need to reinstall the application with the same signature and uninstall it completely. If you really want to continue, run 'adb shell pm uninstall -k'. C: Programs (X86) Minimal ADB and FastBoot> Shell ADB PM Uninstall -K -User 0 com.Mazon.dcp Failure - Not installed for 0 C: Programs (X86) Minimal ADB and FastBoot> ADB Shell PM UnInstall -K -User 0 com.Mazon.DeviceControl Failure - Not installed for 0 C: Programs (X86) Minimal ADB and FastBoot> SHELL ADB PM UnInstall -K -User 0 com.Amazon.PrealControls failure - not installed For 0 C: Programs File (X86) Minimal ADB and FastBoot> Shell ADB PM Uninstall -K -User 0 com.amazon.settings.SystemUpdates Fail - Not installed for 0 C: Program Files (X86) Minimal ADB and FastBoot> Shell ADB PM Uninstall -K -User 0 com.Amazon.Shm Fail - Not installed for 0 C: Programs File (X86) Minimal ADB and FastBoot> Shell ADB PM Uninstall -K -User 0 com.amazon.tz.webcryptzservice Failure - Not installed for 0 as See that I had to vary the command a little (add 'shell pm') and there were 7 apps 1 got "not installed for 0" for. Furthermore, he worked treatment and launches in Appstarter much faster. You have any ideas, because I can't the menu of the applications in your app and via the Start activity you are working (com.amazon.tv.settings / .tv.applications.ApplicationsActivity)? But the other 3 men are working well in your app. Is there a difference between menu 3 and the Applications menu? The same problem here. Unable to obtain a list of applications, but all the other options work. When I click "Applications" in confIREator goes blue (as if the pitcher is coming on Amazon), but then quickly goes back to AppStarter. @ Patriot1889 there is something wrong to open the application menu from confIREator: E / AndroidRuntime (28936): Fatal exception: main E / AndroidRuntime (28936): Process: com.amazon.tv.settings, PID: 28936 E / AndroidRuntime (28936): java.lang.RuntimeException: unable to start ComponentInfo activities com.amazon.tv.settings {} / com.amazon.tv.settings.tv.applications.ApplicationsActivity: java.lang.NullPointerException: attempt to read from the field 'Android.content.pm.ApplicationInfo com.amazon.tv.settings.tv.AppSortHelper.mAppInfo' on an object reference null E / AndroidRuntime (28936): a android.app.ActivityThread.performLaunchActivity (ActivityThread.java:2367) E / AndroidRuntime (28936): a android.app.ActivityThread.handleLaunchActivity (ActivityThread.java:2435) E / AndroidRuntime (28936): a android.app.ActivityThread.access \$ 800 (ActivityThread.java:160) E / AndroidRuntime (28936): a android.app.ActivityThread \$ H.handleMessage (ActivityThread.java:1321) AND / AndroidRuntime (28936): a android.os.Handler.di spatchMessage (Handler.java:102) E / AndroidRuntime (28936): a android.os.Looper.loop (Looper.java:135) E / AndroidRuntime (28936): a android.app.ActivityThread.main (ActivityThread.java: 5484) E / AndroidRuntime (28936): a java.lang.reflect.Method.invoke (native method) E / AndroidRuntime (28936): a java.lang.reflect.Method.invoke (Method.java:372) E / AndroidRuntime (28936): a com.android.internal.os.ZygoteInit \$ MethodAndArgsCaller.run (ZygoteInit.java:984) E / AndroidRuntime (28936): a com.android.internal.os.ZygoteInit.main (ZygoteInit.java:779) E / AndroidRuntime (28936): caused by: java.lang.NullPointerException: attempt to read from the field 'android.content.pm.ApplicationInfo com.amazon.tv.settings.tv.AppSortHelper.mAppInfo' on a null object reference E / AndroidRuntime (28936): a com.amazon.tv.settings.tv.applications.ApplicationsActivity \$ 11.Got (ApplicationsActivity.java:2140) E / AndroidRuntime (28936): a com.amazon.tv.settingslib.Layout.findHeader (Layout.java:2566) E / AndroidRuntime (28936): a com.amazon.tv.settingslib.SettingsLayoutActivity.onCreate (SettingsLayoutActivity.java:8523) E / AndroidRuntime (28936): a com.amazon.tv.settings.tv.applications.ApplicationsActivity.onCreate (ApplicationsActivity.java:206) E / AndroidRuntime (28936): a android.app.Activity.performCreate (Activity.java:6010) E / AndroidRuntime (28936): a android.app.Instrumentation.callActivityOnCreate (Instrumentation.java:1122) E / AndroidRuntime (28936): a android.app. ActivityThread.performLaunchActivity (ActivityThread.java:2320) E / AndroidRuntime (28936) ... 10 more / AndroidRuntime (28936): to report fatal to activityManagerService 1 / ActivityManager (544): handleApplicationCrash W / ActivityManager (544): Strength finishing of Activity 1 com.amazon.tv.settings / .tv.applications.ApplicationsActivity 1 / ActivityManager (544): addErrorToDropBox inserted hash code = 1522a399ad4fa60b92a271b9b446b578251931a for eventType accident. 1 / Vlog (544): 1p, 2p: fg crash: fgtracking = true; DV: 1, key = com.amazon.tv.settings; DV: 1, Counter = 1.0; CT: 1 unit = count; DV: 1, metadata = 1522a399ad4fa60b92a271b9b446b578251931a; DV: 1: H1 W / ActivityManager (544): Strength Activity finishing 2 com.patriot.confireator / .MainActivity 1 / AndroidRuntime (28936): fatal finished signaling for activityManagerService 1 / process (28936): the signal sending. Follow the instructions and download Appstarter and the hijack launcher and launcher, all installed, so I really don't understand what's wrong here. Please help? My version of Firetv is the last time I believe 5.2.6.0 It is not necessary to restore, I have the same situation, go to settings, app and starts the Appstarter and you make sure that the hijacking is configured for Appstarter. It's fantastic. In the end to be able to strip the 90% of this thing to its naked bones is fantastic. Almost as good as the root for me. Thank you so much for this thread. I went ahead and did it, but it seems that for the process of Hijacker Somerson keeps being killed. Thanks a couple of times, then stops to anyone who has closed the benchmarks before and after the de-swalling? So let's know if this helps to compare only to leave files? Or at least the difference from the hiding place and uninstallation would be something I would like to know. I'm back. But actually I returned my growth as I was disappointed with performance. I'm not sure what the problem that works perfectly well on my stick and I can't make a debugging like I don't have any more. Does this debloat work for the new Fire TV 2? A factory reset has not canceled these changes? Last modified: November 10, 2017 Debloater does not work for my growth 2 ... I want to block the update on my growth 2 ... some suggestions please ... thanks ... Page 3 You can update the packages Delete / keep for your last firmware? There are some other new packages now and some do not exist. WiFi does not connect to me after reboot. It connects only when I insert the wifi settings on the confnitr. Someone has an idea, what did I do wrong? Edit: I forgot to say I'm using a 2nd Gen. Edit2 Firetv box: solved myself. I will publish a Remove ADB Batch file for 5.2.6.0 in the coming days. Last modified: 4 December 2017 The 2nd Gen Stick was quite well for me in stock but use Plex and not Kodi, so I don't know if this makes the difference. I'm not sure that I'd really get anything to do this but I'm passionate about trying only for a cleaner interface. Is there a way to brick this stick if I \*\*\*\*? I hit the same problem with wifi no until the confireator setting opens. Waiting for some information How do you have the Solver ID can you update Deblo / Keep packages for the last firmware? There are some other new packages now and some do not exist. WiFi does not connect to me after reboot. It connects only when I insert the wifi settings on the confnitr. I'm not sure that I'd really get anything to do this but I'm passionate about trying only for a cleaner interface. Is there a way to brick this stick if I \*\*\*\*? I hit the same problem with wifi no until the confireator setting opens. Waiting for some information How do you have the Solver ID can you update Deblo / Keep packages for the last firmware? There are some other new packages now and some do not exist. WiFi does not connect to me after reboot. It connects only when I insert the wifi settings on the confnitr. Someone has an idea, what did I do wrong? Edit: I forgot to say I'm using a 2nd Gen. Edit2 Firetv box: solved myself. I will publish a Remove ADB Batch file for 5.2.6.0 in the coming days. Last modified: 4 December 2017 The 2nd Gen Stick was quite well for me in stock but use Plex and not Kodi, so I don't know if this makes the difference.
