Anna Sherry, updated on 03/12/2020/Samsung Samsung updating touch screen is a common problem among users of Samsung devices because these phones often have issues with touch screen. If the touch screen of your Samsung device is not responding, you may want to do something or you may not be able to use your device. After all, touch allows you to take action on your device, and you can't really do anything about your device with a broken touchscreen. Fortunately, there are several ways to get the touchscreen to work with your Samsung device. These methods are divided into two parts, hardware methods and software methods. Depending on why the touch screen is not working, you may want to find and use the right way to repair Samsung phone touch screen not working on your device. Before proceeding with the fix and attempting to repair the screen, you may want to know why the screen is not responding to your touches. These are some of the most common issues that can cause screen malfunction on a Samsung device. 1. Physical damage The touch screen may be physically damaged, so it cannot recognize touches. If you let the device fall to the ground or sit on it, the touchscreen may be damaged. 2. Software bug causing apps to malfunction, sometimes apps on your device will go crazy, firmware will go crazy. Thus, the screen does not respond to your touches. 3. Android system problems may be caused by device operating system problems. A special repair process is required to fix the problem. 4. Discovered Settings If the basic settings of the device are not correct, the device may not recognize haptic input items. Now that you know the possible causes of touch screen not working, this section should provide you with software solutions to fix the problem on your device. 1. Forced restart of your Samsung phone, one of the simplest things you can do to fix a problem with your device is to restart the device. A hard reset usually fixes many problems and should help fix the touchscreen issue. Hold the ignition buttons and the volume down simultaneously for about seven seconds. Your phone should reboot. 2. If you think it is one of the apps on your Samsung device, check if there are problems with the wrong apps in safe mode Anna updated by Sherry at 03/12/2020 / Samsung Touch Screen not working, these phones are often a common problem among Samsung device users as they often face issues with touch screens. If your Samsung device's touchscreen is unresponsive, you may want to do something about it or use your device at all. After all, operations on the device can be done by touching and you really won't do anything on your device with a broken touchscreen. Luckily, there are several ways to check your Samsung device's touchscreen. These methods are divided into hardware methods and software methods. Depending on the reason for the touchscreen not working, you might want to find and use the right way to fix Samsung phone touchscreen not working on your device. Before you can jump into the fixes and try to fix the screen, you might want to know why the screen isn't responding to your touches. Below are some of the most common issues that can cause the screen to work on a Samsung device. 1. Physical damage touch screen may be physically damaged, so it can't recognize taps. If you dropped the device on the floor or someone sat on it, the touch screen may have been damaged. 2. A software error that causes programs to fail. Sometimes your device software causes your device apps to crash. Then it does not respond to your screen touches. 3. Android system problems may have problems in the device's operating system. This requires a special repair process to fix the problem. 4. If the basic settings of your device are incorrect, your device cannot recognize your touch inputs. Since you know the possible reasons for the touchscreen not working, this section should give you some software solutions to fix the problem on your device. 1. Hard reset your Samsung phone. One of the easiest things you can do to fix a device problem is to restart your device. Resetting from hardware usually relieves many problems and also fixes the touchscreen problem. Simply hold the power and sound controls for about seven seconds at the same time. Your phone needs to be hard restarted. 2. If you think one of the apps on your Samsung device is a bad app problem, check for a bad app problem in safe mode. If your Samsung J7 touch screen does not work, you can restart the device in a safe mode to explore the problem. To restart the Samsung phone in a safe mode, press the power button, and then press and hold the reboot to restart the device in safe mode. Going into a safe mode, delete the application, which, in your opinion, causes a problem, and this should solve the problem on your device. 3. Rigate the data/reset to the factory settings in recovery mode. If the above solution did not eliminate the problem with the touch screen of your phone, you can dump to factory settings. To restore the factory settings and delete all the data from your device, just reboot the device in recovery mode, while pressing the power buttons, at home and increasing the volume for several seconds, and select Wipe Data/Factory Reset. 4. Correct the Samsung touch screen for Android, which does not work. If the problem with the touch screen is associated with the Android system, you can fix the system itself using a special repair tool. One of the programs that will help you solve problems on Android devices is Reibot for Android. It was specially created to solve problems that may arise on Android devices. This allows you to repair the core of the system itself, which entailed the elimination of all other problems of the device. Step 1 Connect the device to the computer. Download and start the software and click on the Android system recovery option. Step 2. On the next screen, click "Restore now" and start repairing Samsung devices. In the next screen, enter information about the device and click "Next". Step 3. After loading the firmware, click "Restore" and start the restoration of the device. That's all. This will solve the problem with the Samsung A3 touch screen, which does not work on your device. If the problem is caused by a physical element, the next equipment repair should help. 1. The screen cleaning over time on the screen accumulates the dust from external sources and it is important to keep it on so that it remains sensitive. Use clean fabric to remove dust and other particles from the screen and get to work. 2. Remove the protective film from the screen. If you use a protective film for the screen, try to remove it from the device to check if the touch screen reacts to your click. If so, the culprit was your protective film for the screen, and it must be replaced with a good one. 3. Remove the memory card and SIM card. You can try to extract a memory card and a SIM card from the device. To find out if it helps to respond to your touchscreen. 4. Dry the device if you get wet if the device is in water and the device is wet, keep the rice device dry overnight. The rice absorbs the water and your device dries out. Therefore, you can see if the touchscreen has started working. 5. Let Samsung check the device if none of the above methods work for you, go to Samsung official store and see if the representatives can help you. Denying the touch screen will not allow you to do anything for your Samsung device. The solutions above will help you fix the problem and make sure your touchscreen recognizes your taps. But if your touchscreen is not working due to a system error, the only option is to use a professional Android repair program to fix the problem. TenorShare Reiboot for Android is highly recommended as it is one of the best system restore software. Anna Sherry update 2020-03-12 / Samsung Touch screen update not working Samsung is a common problem with Samsung devices as these phones often have issues with the touch screen. If your Samsung device touch screen is not to blame then there is something you can do or maybe you can't use your device. After all, this is exactly what allows you to take measurements on the device, and using deficiencies in the touchscreen cannot do anything for your device. Luckily, there are several ways to get a touchscreen to work on your Samsung device. These methods are divided into two: hardware and software methods. Depending on the reason for the touchscreen not working, you can find and use the right method to fix Samsung phone touchscreen not working on your device. Before moving on to fixes and trying to repair the screen, you might want to know why the screen is not responding to your touch. Below are some of the common issues that can cause the screen to stop working on the Samsung device. 1. Physical damage. The touchscreen may have suffered physical damage that prevents it from recognizing your touch. If you drop the unit on the floor or someone sits on it, the touch screen may be damaged. 2. The software error that causes anomalous application detailing programs, sometimes it's your device software that promotes applications in mind. This means the screen is not responding to your strokes. 3. System issues can be an issue with the device's operating system. A special repair process is required to fix the problem. 4. Wrong settings If the main settings of the device are wrong, the device may not recognize your touch input. Now that you know the possible cause of the touch screen not working, this section should provide software techniques to fix the device problem. 1. Restarting a Samsung phone is difficult. One of the easiest measures to fix the device problem is to restart the device. Heavy overloads usually fix a lot of issues and should help fix the touchscreen issue. Just press and hold the power and volume down buttons for about seven seconds each. Your phone should restart. 2. In Safe Mode, check for corrupt program problem. If you find that the Samsung J7 touch screen is not working on any of the Samsung apps, you should restart your device in Safe Mode to investigate the issue. Press and tap the power button to restart your Samsung phone in safe mode and the restart option to restart your device in safe mode. After entering Safe Mode, uninstall the program that you think is causing the problem and the problem should be resolved on your device. 3. Wipe Data / Factory Reset Recovery mode allows you to restore the device to its factory settings if the above solutions didn't fix the phone's touchscreen issues. To restore factory settings and erase all data from the device, reboot the device into recovery mode by pressing and holding the power, home, and volume up buttons each for a few seconds and selecting Data / Factory data reset. 4. Fix Samsung touch screen not caused by Android system. If your Android system is causing touch screen problems, you should repair the system yourself with a dedicated repair tool. One of the software that helps to decrypt Android devices is Reibot for Android. It is specially designed to solve problems that Android devices may encounter. This will repair the system's kernel, which will fix all other issues of the device. Step 1 Connect the device to your computer. Download and run the software and click Android System. Step 2 On the next screen, click Repair Now to start repairing Samsung device. Enter Device information on this screen and click. Step 3 After downloading the software, click Repair Now to start repairing your device. That's all. Doing so will fix the Samsung A3 touchscreen not working issue on your device. If a physical object is causing the problem, this hardware fix should help. 1. Clean Your Screen Over time, dust from external sources builds up on your screen, and it's important to keep your screen clean so it remains responsive. Use a clean cloth to remove dust and other particles from the screen and it should work. 2. Remove the screen protector If you are using a screen protector, try removing it from your device and see if the touchscreen will respond to taps. In that case, its screen protector was the culprit and needs to be replaced with a good one. 3. Remove the memory card and SIM card. You can try removing the memory card and SIM card from your device to see if that helps your touchscreen. 4. The rice absorbs the water and the appliance dries. Then you can see if the touch screen works. 5. Let Samsung check your device, if none of the above methods work for you, go to an official Samsung store and see if the representatives can help you. The non-descript touchscreen does nothing on your Samsung device. The above solutions help fix the problem and force the touch screen to recognize your touch. However, if your touchscreen is not working due to a system error, the only solution is to use Android System Restore Professional to fix the problem. Android tenor form is highly recommended as it is one of the best system recovery software. Programs.
